Hours & Locations Portal: Add/Delete Location

<u>TO ADD OR DELETE A LOCATION</u>

First, the location will need to be added/deleted behind-the-scenes – both the location itself and all related hours for it.

Then make **3 changes to the hours.css file** (where commented):

1) Change the height for #map.
2) Change the height for .ie7 #map.
3) Add a background (image) to the appropriate #slide-content #DIVNAME .library-img or delete the corresponding #slide-content #DIVNAME .library-img line.

Make **6 changes to the hours.js file** (where commented):

1) Change the divsArray variable to add/delete the corresponding div. This name should match the database login name.
2) Add or delete a branch coordinate with appropriate variable name i.e. latlngLOCATION (where LOCATION = capitalized first word of the location name). If adding, you will first need to determine latitude and longitude, see: http://universimmedia.pagesperso-orange.fr/geo/loc.htm.
3) Add or delete the marker for the location (unless marker is shared e.g. IKBLC). This name should also match the database login name, for consistency's sake.
4) Change the markersSelectedChoices variable to add/delete the corresponding div. This name should also match the database login name.
5) Add or delete table events for the corresponding div (for both hovering and clicking).
6) If needed, modify the close button event to add/delete any view variation.

Make **1 change to the calendar.inc.php file** (where commented and if applicable):

1) If needed, add/delete if statement regarding separate reference hours URL (when different from database-saved site URL).
